RAJSIMMAN RAVICHANDIRAN

401-3420 Eglinton Ave. E
Scarborough, Ontario M1J 2H9

rajsimman.ravichandiran@mail.utoronto.ca 647-688-4848

EDUCATION

Master of Applied Science, University of Toronto (U of T) 2016-2018
Major in Electrical Engineering

Bachelor of Applied Science, U of T 2009-2014
Major in Electrical Engineering with 1 year Professional Year Experience (PEY)

- Final year GPA: 3.51, Dean's List

TECHNICAL SKILLS

- **Programming**: Python, Shell Scripting, C/C++, SQL, HTML, CSS, PHP, JavaScript
- **Operating Systems**: Linux (RedHat, Ubuntu, Kali) and Windows
- **Applications**: Docker, OpenStack, Elasticsearch, Kibana, Django, NGINX
- **Tools**: Git, Splunk, MATLAB, WireShark, Cacti, iPerf

RELEVANT ENGINEERING EXPERIENCE

Master of Applied Science Thesis Research, U of T Sept. 2016 - Dec. 2018

- Designed Autonomic Management System (AMS) to manage both compute resources and network resources for multi-tier IoT applications
- Developed autoscaling modules for microservices and virtual machines (VMs) using Docker
- Utilized Software-Defined Networking (SDN) to govern network bandwidth for applications to maintain expected quality of service
- Investigated economic denial of sustainability (eDoS) mitigation techniques to secure AMS
- Deployed Neurocomputing-based anomaly detection models to prevent eDoS attacks
- Created IoT application to monitor crowd movements using WiFi information collected passively by Onion IoT devices
- Evaluated AMS on research cloud platform using crowd monitoring application
- Released AMS source code for open-source community use: https://github.com/RajsimmanRavi/Elascale_secure

Network Analyst, Bell Canada Jan. 2015 - Sept. 2016

- Created full-stack web application (using Django web framework) to provision virtual machines on Bell Toronto-IP-and-Innovation-Centre (TIPIC) Lab Cloud Infrastructure
- Implemented open-source Linux framework to create Point-to-Point over Ethernet (PPPoE) sessions on virtual platform
- Developed web application (using Tornado web framework) that allows network testers to provision PPPoE sessions on-demand and use it for network troubleshooting
- Deployed application on Production environment using NGINX load balancer
- Designed RESTful API for Network Operations Team to correlate Bell Customer identity and network information
- Wrote automated scripts to parse and aggregate Simple Network Management Protocol (SNMP) data (generated by routers) for network troubleshooting purposes
- Produced Customer Intelligence Reports to provide interesting insights on Bell's Wireline Internet technologies using data analytics tools such as Splunk and Deepfield

Research Assistant, Smart Applications on Virtual Infrastructure (SAVI) May - Dec. 2014

- Actively worked on a national distributed application testbed, which adopts the Infrastructure as a Service (IaaS) cloud-service model, to provide a platform for creating and delivering future internet applications and network architectures
- Focused on extending the capabilities of the monitoring and measurement services (Ceilometer) of OpenStack open-source cloud computing platform on SAVI Testbed
- Installed software and hardware servers for cloud management
- Created email notifications service for Ceilometer alarm service
- Wrote automated scripts to measure the query speed of Ceilometer API and database
- Implemented communication drivers between Kafka messaging broker and Cassandra database used by monitoring architecture for resource management on Testbed

COURSES AND PROJECTS

Team Lead, User Behaviour Analysis using OSSEC on Cloud Infrastructures, U of T Dec. 2016

- Analyzed User Behaviours on VMs for OSSEC Host-based Intrusion Detection System (HIDS)
- Profiled users based on input shell commands on the environment
- Utilized Naive Bayes Supervised Machine Learning model to accurately classify multiple users
- Trained learning model using open-source UNIX public dataset
- Achieved 69% accuracy without any hyper-parameter tuning or advanced training
- Implemented Proof-of-Concept on SAVI Testbed

Team Lead, Video streaming on the Edge, SAVI Design Challenge, U of T Aug. 2014

- In a team of 4, created an application that connects video content publishers on SAVI cloud platform to subscribers interested in streaming the content
- Utilized Twitter social platform to communicate between the publisher and subscriber
- Incorporated stream processing to filter real-time tweets and find both parties
- Built application on SAVI Testbed in 3 days, **won Design Challenge**
